Water & Wastewater Corrosion Prevention
Petrolatum Wax Tape System

- Sewer Pump Stations
- Water Transmission Pipelines
- Bell & Spigot Inclusions
- Potable Water Lines
- Municipal Castings
- Valves & Fittings
- Pipe Restraints
- And so much more
Water and wastewater systems run through all major cities and rural areas. There are many corrosion problems from aggressive soils to underground vaults that are constantly in wet/dry environments. Denso’s petrolatum tape systems protect water and wastewater pipelines, bridges, valves, chambers and more from corrosion and water infiltration. Our petrolatum products have proven case histories dating back to the 1920s and are installed now under ISO 9001 for manufacturing and ISO 14001 for environmental management.

Features
- Meets AWWA C217 and NACE RP0375 Standards
- Applied to marginally prepared surfaces (SSPC SP 2-3)
- Can be applied in any climate
- Can be applied to wet or underwater surfaces
- Contains no VOC's
- Can be applied to preformed materials
- Resistant to impact and flex
- Not affected by water, acid, salts or organics
- Long shelf life
- Will adhere to metal, PVC and polyethylene
- Excellent sealing and molding properties
- Cold applied, self-supporting and flexible
- History of proven applications since 1929
