1.0 Scope

1.1 This specification covers the external surface preparation and coating of pipelines for rehabilitation, welds, directional drill, fittings and fabrication.

1.2 All spray application personnel shall be trained by a Denso representative prior to application of Protal 7200. Additionally, all spray application personnel shall be trained in the proper spray pump operational procedures by the specific spray pump manufacturer.

2.0 Material and Storage

2.1 Material shall be Denso Protal 7200 liquid coating system as manufactured by Denso North America, 9710 Telge Road, Houston, TX 77095 (Tel) 281-821-3355 (Fax) 281-821-0304 or 90 Ironside Crescent Unit 12, Toronto, Ontario, Canada M1X1M3 (Tel) 416-291-3435 (Fax) 416-291-0898. E-mail: info@densona.com.

2.2 Material shall meet the physical properties of the attached product data sheet.

2.3 Storage of the material shall be in a warm dry place, between 40°F (4°C) to 105°F (41°C). The containers shall be stored up right. Do not allow material to freeze.

3.0 Equipment

3.1 Graco XP70 Plural Component Sprayer designed to mix and atomize 100% solids epoxies. At a minimum the equipment shall consist of the following components:

- 3:1 mix ratio set up with pressure relief valves and recirculation valving
- 145cc: 48 cc displacement pump set up
- 4 kW inline heaters
- 25 gallon (94.6 L) heated tanks
- 5:1 supply pumps in heated tanks
- 45:1 Merkur solvent flush pump
- Pressure monitor for ratio assurance (preferred)
- 100’ (30.4 m) heated hose bundle (½” / 12.7 mm resin, ¾” / 9.5 mm hardener, ¼” / 6.4 mm solvent)
- 2 each ¾” (9.5 mm) x 12 element static mixers (stainless steel preferred)
- ¼” (6.4 mm) whip hose (15’ / 4.5 m to 25’ / 7.6 m) with ¼” (6.4 mm) static mixing tip
- All hoses need to comply with pressure ratio limits @ 7200 PSI (49.6 MPa)
- XTR Spray Gun
- Tip size: .019 - .031

3.2 Part A should be heated to 140°F - 160°F (60°C - 71°C) and Part B heated to 100°F - 110°F (38°C - 43°C). Hose bundle shall be set at 140°F - 150°F (60°C - 65°C).

3.3 A solvent such as Xylene, MEK, Toluene, or a combination of the three is recommended to clean the equipment.

3.4 Wet film thickness gauges.

4.0 Surface Preparation

4.1 All contaminants shall be removed from the steel surface to be coated. Oil and grease should be removed in accordance with SSPC SP-1 using the solvent Xylene.

4.2 Material for abrasive cleaning shall be the appropriate blend of grit to produce an angular surface profile of 2.5 - 5 mils (0.063 - 0.125 mm).

4.3 All surfaces to be coated shall be grit blasted to a near-white finish (SSPC SP-10, NACE No. 2 or Sa 2 1/2). Note: Near-white finish is interpreted to mean that all metal surfaces shall be blasted clean to remove all dirt, mill scale, rust, corrosion products, oxides, paint and other foreign matter. Very light shadow, very light streaks or slight discoloration’s shall be acceptable; however, at least 95% of the surface shall have the uniform gray appearance of a white metal blast-cleaned surface as defined by Swedish Pictorial Surface Preparation Standard Sa 2 1/2 or SSPC VIS-1.

4.4 Edges of the existing coating shall be roughened by power brushing or by sweep blasting the coating for a distance of 1” (25 mm) minimum.

4.5 The Contractor shall check the surface profile depth by using a suitable surface profile gauge (Press-O-Film Gauge or equal).

4.6 Metal areas that develop flash rust due to exposure to rain or moisture shall be given a sweep blast to return them to their original blasted condition.

5.0 Application

5.1 The surface shall have no condensation, precipitation or any other forms of contamination on the blasted surface prior to coating.

5.2 The substrate temperature range for application of Protal is 50°F (10°C) to 212°F (100°C). The substrate
7.0 Repairs

7.1 For small pinhole repairs: Surfaces of repair up to 1/16 inch (2 mm) in diameter, roughen the surface of the parent coating, to remove gloss, around the holiday for at least 1 inch (25 mm). Use 80 - 120 grit sandpaper or light sweep blasting.

7.2 Medium sized repairs: Surfaces of repair areas up to 4 in² (25 cm²) in size, shall be prepared by abrasive blasting, as specified in Section 11, or by power tool cleaning in accordance with SSPC-SP 11 to remove dirt, scale, rust, damaged coating and any other foreign material to a bare metal condition and retain or produce the surface profile required by Section 4.0.

7.3 Large repairs: Surfaces of repair areas exceeding 4 in² (25 cm²) shall be repaired by abrasive blast cleaning as specified in Section 4.0.

7.4 The adjacent parent coating and any holidays or damaged coating adjacent to the cutback area shall be roughened for at least 1 inch (25 mm) around the repair and the edges shall be feathered.

7.5 After abrading, all dust shall be removed from the prepared areas using compressed air, a clean, dry bristle brush, a clean dry cloth or removed in accordance with SSPC-SP-1 using acetone, xylene or MEK.

7.6 Refer to “7200 Accelerated Cure Specifications for Repairs” for additional information.

8.0 Safety Precautions

8.1 Follow the guidelines detailed in the Safety Data Sheets (SDS).

8.2 Keep containers closed when not in use. In case of spillage, absorb with inert material and dispose of in accordance with applicable regulations.

8.3 No open flames, smoking or welding will be allowed in the immediate vicinity during the spray application of Protal 7200 liquid coatings.

8.4 Always refer to project specifications as they may supersede Denso specifications.
