

BAYSIDE PHASE 2

CASE STUDY

Support Rods

Support rod of the shoreline wall is exposed during the reconstruction phase.

A thin layer of Denso Primer is applied to the exposed substrate prior to the application of Denso Petrolatum Tape.

Denso Petrolatum Tape is spirally wrapped, with a 55% overlap, to complete this corrosion protection system.

Project Data

Location	Toronto, Canada
Completion	2017
Project Type	Shoreline Wall Support Rods
Products Used	Denso Paste and Denso Petrolatum Tape
Contractor or Applied By	UCC Group Inc.

Project Details

As part of the preparation for Ontario's first LEED® Gold certified neighborhood, this 1.1 billion dollar 2,000 acre development and revitalization of Toronto's waterfront district at Queen's Quay, has to undergo redesign and reconstruction. Part of this project involves the reconstruction of the shoreline wall that protects against erosion. The support rods, that go back hundreds of feet horizontally, are being redesigned to utilize diagonal anchor rods to allow the construction of deep-rooted high-rise buildings. During this construction phase, the rods are exposed, evaluated, repaired and then protected with a corrosion prevention system.

The Denso Petrolatum System was utilized to prevent corrosion and give peace of mind to the city. The shoreline wall rods were coated with Denso Paste by hand. This primer will displace moisture, arrest existing corrosion and aid in the adhesion of the Denso Petrolatum Tape, which was spirally wrapped with a 55% overlap around the rods. These rods, with the Denso Petrolatum Tape System, will also be encapsulated in conduits and then in concrete blocks that in turn will be buried and remain under the multi-million dollar landscaping and pathways that will intersect the lakefront.

The Denso Petrolatum System has been proven to be effective against corrosion in continued service for nearly a century and has also been found to be the most cost-effective solution in preventing corrosion related failure. Denso North America is proud to be part of the development and protection of the infrastructure of Canada's largest city. For more information or a demonstration, contact Denso North America.
